

SC-400

Microsoft Information Protection Administrator

CERTIFICATION TRAINING

KEY FEATURES

- Access to the recorded sessions
- Flexible training schedule
- Certified & Experienced Instructors
- Training support

Overview

Microsoft certifications are in high demand of employers and most sought-out skills for IT personnel. The Information Protection Administrator course is structured in such a way that the candidate should be able to understand the organizational needs to identify critical data, prevent data loss, and govern the data. This course explains how data governance and information security are seen in any organization. It demonstrates implementing data loss protection policies, sensitive information types, sensitivity labels, data retention policies, and Office 365 message encryption.

The candidate will learn how to plan and implement controls that meet organizational compliance needs. They assist organizational control owners to become and stay compliant. This course will teach you how to convert specifications and compliance controls into technical execution. This course will help you become familiar with the profile of Information specialists and Compliance professionals.

Target Audience

The Microsoft Information Protection Administrator SC-400 Certification is intended for:

- Risk Practitioner
- Administrator
- Security Engineer

Pre-Requisite

- Basic knowledge of Compliance and Security
